Build a Mealy Machine which counts double letters in an Input String

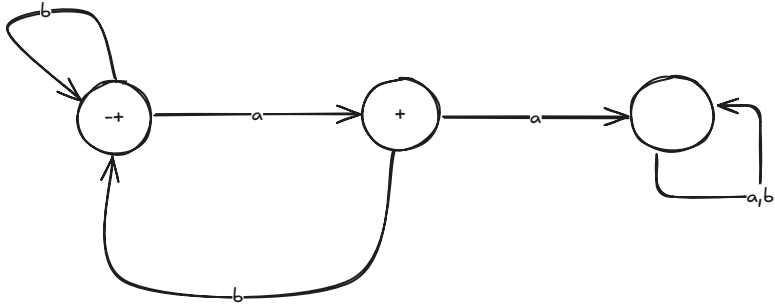

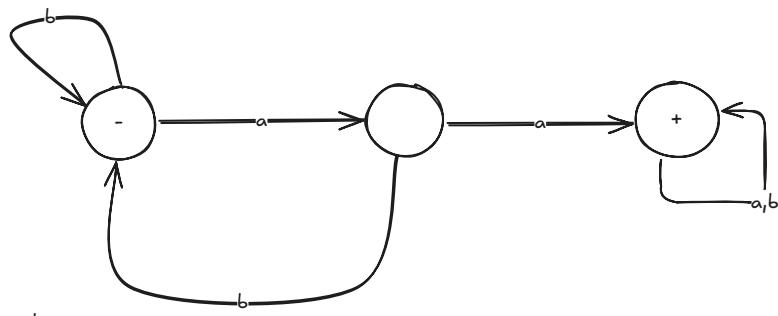

- **Interconversion between Mealy and Moore Machine**

- To convert Moore to Mealy Machine, check for incoming edges. Convert all the incoming edges to a specific state with output under the edge. $q_0/0 \xrightarrow{a} q_1/1$, will be $q_0 \xrightarrow{a/1} q_1$.

- **Complement of a Language**

- Convert final state into non-final state. And non-final state into final state.

-
- **De-Movre's**
 - $L1 \cap L2 = (L1' \cup L2)'$
