

October 12, 2025

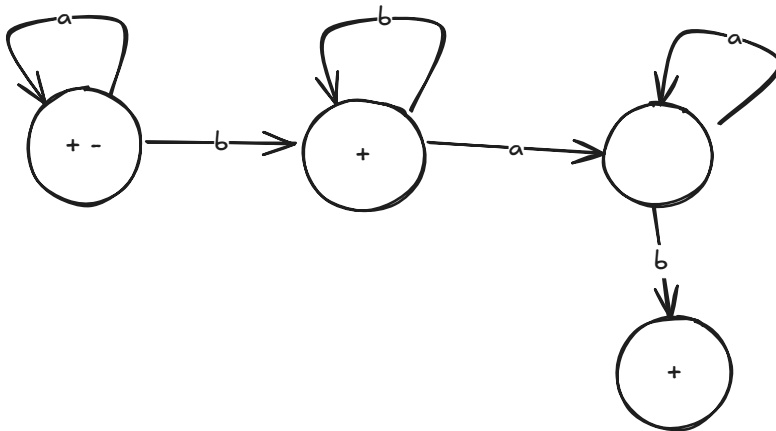

- Find minimum word of the language.
- Dead-end / Non-final state: Which does not accept anything further.
- Deterministic finite automatic.
- Final state - multiple with different letters.

Finite Automata Practice

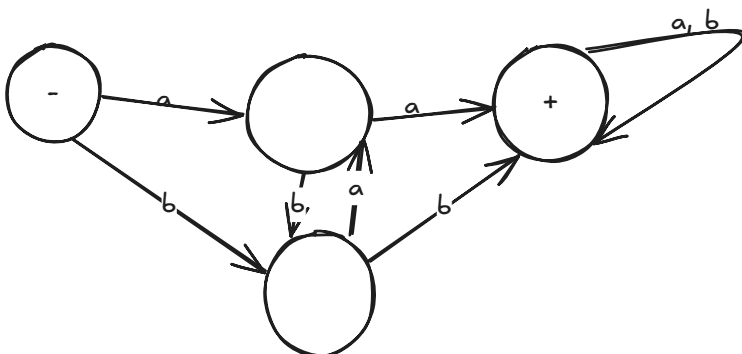

All words don't end with 'b'.

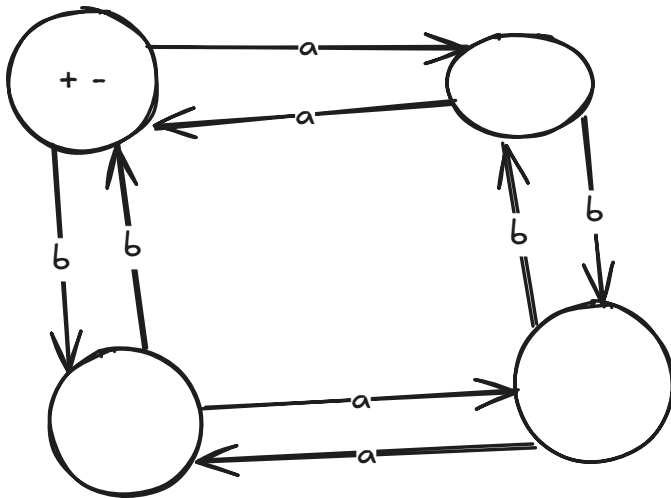

All words that don't end with 'ba'

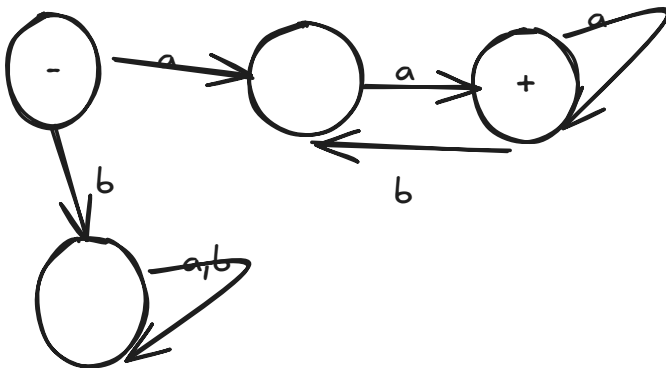

Build a FA which accepts all words having double4

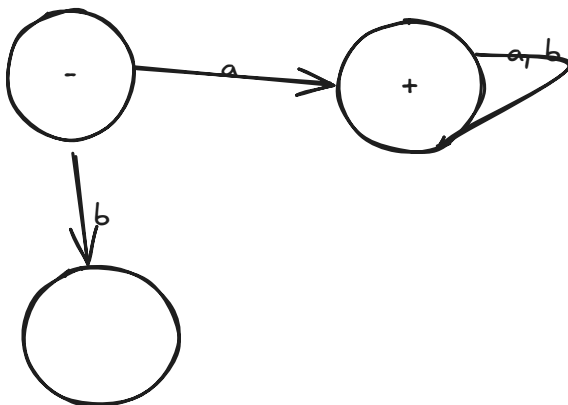

Words containing even amount of a's and b's

All words starting and ending with 'a'

Build a FA which accepts all words starting with 'a'

All words starting and ending with different letters
